Brian Obot

Software Engineer (Backend) | Python | Rust | AWS

brianobot9@gmail.com | +234 701 897 7031 | brianobot.tech | github.com/brianobot | linkedin.com/in/brian-obot

PROFESSIONAL SUMMARY

Software Engineer specializing in backend systems, with 4 years of experience building and scaling high-throughput APIs and data platforms in Python and Rust for fintech and AI products. Led a team of 5 engineers that shipped 5 user-facing products in 12 months to 40,000+ monthly active users on AWS. Cut p95 API latency from 820 ms to under 100 ms by moving compute-heavy paths to Rust, and maintained 99.99% availability on core services. Electrical engineering background with a focus on performance, reliability, and observability.

TECHNICAL SKILLS

Languages: Python, Rust, SQL, PHP
Frameworks: Django, FastAPI, Flask, Axum, Laravel, Pydantic
Databases & Messaging: PostgreSQL, MySQL, SQLite, Redis, Kafka, RabbitMQ, Celery, Amazon SQS
Cloud & DevOps: AWS (ECS, RDS, S3, SQS, CloudWatch), Kubernetes, Terraform, Docker, GitHub Actions, CI/CD
Observability & Testing: Prometheus, Grafana, OpenTelemetry, k6 Load Testing, Pytest
Architecture: REST APIs, WebSockets, Event-Driven Architecture, Microservices, Asynchronous Programming, SLO/SLI Design, Architecture Decision Records (ADRs)
AI & Automation: LLM Evaluation, Reinforcement Learning from Human Feedback (RLHF), Claude Code, Codex, n8n

PROFESSIONAL EXPERIENCE

Lead Backend Engineer | Plotweaver AI

London, United Kingdom (Remote) | Mar 2025 – Oct 2026

- Led a team of 5 backend engineers (hired 2, mentored 2 from mid-level to senior) that shipped 5 user-facing products in 12 months; owned architecture decisions, code-review standards, on-call rotation, and release planning with product and design.
- Designed the core platform in FastAPI and Rust (Axum) on AWS ECS, serving 40,000+ monthly active users at ~1,200 requests/sec peak while maintaining 99.99% availability (SLO tracked in Grafana).
- Re-implemented compute-heavy metrics endpoints in Rust, cutting p95 latency from 820 ms to under 100 ms (over 85%) and reducing compute spend by ~30%.
- Used async/await in Rust and Python to sustain 1,000+ concurrent connections at peak; validated 3x headroom with k6 load tests before each major launch.
- Standardized CI/CD on GitHub Actions and Terraform, cutting deploy time from 40 to 9 minutes and enabling ~15 zero-downtime production releases per month.
- Introduced Prometheus, Grafana, and OpenTelemetry tracing, reducing mean time to resolution (MTTR) on incidents from ~90 to ~25 minutes.

Software Engineer, LLM Evaluation & Code Generation | Turing

Remote (Contract, Part-Time) | Jan 2025 – Feb 2025

- Evaluated and ranked 1,500+ LLM outputs (RLHF) on backend code-generation tasks and authored 60+ gold-standard Python and Django reference solutions that informed model fine-tuning.
- Built ingestion, validation, and review-workflow services for AI training pipelines processing 20,000+ samples per week, rejecting ~8% of malformed submissions before human review.

Backend Engineer | Blucera

Delaware, United States (Remote) | Sep 2024 – Jan 2025 and Sep 2023 – Jan 2024

- Built Django and Python backends for core banking and eVault services used by ~25,000 customers processing 150,000+ transactions per month, sustaining 99.9% API uptime.
- Designed Kafka event-driven transaction processing with idempotent consumers, cutting notification latency from 4.0 s to 2.2 s (45%).
- Re-architected Celery task queues on Redis with priority queues and batching, reducing report-generation time from 25 to 10 minutes (60%).
- Authored architecture decision records (ADRs) for 4 services and led the eVault design (encrypted storage, audit logging, role-based access control), chairing weekly design reviews for a 6-person team.

Backend Engineer | MJD Fintech

London, United Kingdom (Remote, Contract) | Jan 2024 – Sep 2024

- Ramped up on Laravel in 3 weeks and led the migration of 60+ endpoints from Python with full feature parity, improving p95 API response time from 520 ms to 365 ms (30%) and eliminating the 12 slowest MySQL queries through tuning and indexing.

Junior Software Engineer | Learngual

Windsor, Ontario, Canada (Remote) | Nov 2022 – Sep 2023

- Designed a Pydantic data-validation framework adopted across 8 services, blocking malformed data at service boundaries and eliminating recurring data-corruption issues.
- Optimized async task processing on Redis and RabbitMQ, cutting task latency from 6 s to 3 s (50%) for real-time operations.
- Built a Pytest suite (unit, integration, and stress tests) that raised code coverage from 62% to 95% and measurably reduced regressions.

EDUCATION & CERTIFICATIONS

Bachelor of Engineering, Electrical and Electronics Engineering | Madonna University
Certifications: AWS Certified Developer – Associate (2025) | Google Cloud Certified – Associate Cloud Engineer (2023)
Languages: English (Native), French (Intermediate), Russian (Basic)
